Summary

Born on November 5, 2002 in Pavullo nel Frignano (MO), I am a Master's student in Computer Science and Engineering at Politecnico di Milano, with strong interests in ML, applied AI and cybersecurity. Curious and determined, I am driven by continuous learning and growth. Outside of academics and work, I have many interests: I play the guitar, and until 2023 I was a competitive athlete with the athletics team La Fratellanza 1874.

Education

Politecnico di Milano — *Milano, Italy*

Master's Degree, Computer Science and Engineering — *Sep. 2024 - now*

Università degli Studi di Modena e Reggio Emilia — *Modena, Italy*

Bachelor's Degree, Computer Engineering — *Sep. 2021 - Oct. 2024*

- **Thesis:** Implementation of Additional Features for the Web Applicatio Missioni Based on the Django Web Framework
- **Grade:** 110/110

Skills

Programming	Python, C, Java, JavaScript, SQL, Bash, MATLAB
ML & Data	PyTorch, PyTorch Geometric, TensorFlow, Keras, Scikit-learn, NumPy, Pandas, Matplotlib, Hydra
Dev & Security Tools	Linux, Git, Docker, Codex, GDB, PwnTools, Wireshark, Make
Web & Software	Django, HTML/CSS, Flutter, React, Next.js
Languages	Italian (Native), English (C1, IELTS 7.0)

Work Experience

European Space Agency (ESA) · European Astronaut Centre — *Cologne, Germany*

Machine Learning Intern — *Jul. 2026 - Present*

- Developing a machine learning framework for real-time mineral recognition from spectroscopic data for the Caves & Pangaea Team.
- Working with multiple spectroscopy techniques and data sources to consolidate and analyze mineral spectral databases.
- Investigating ML approaches for mineral classification and abundance estimation in support of planetary exploration activities.

NECSTLab, PoliMi — *Milan, Italy*

Student Researcher — *Apr. 2025 - Present*

- Worked on machine learning for genomic variant classification, leading to a publication at IEEE EMBC 2026.
- Reduced training resource usage by up to 10x while preserving model performance, and systematically evaluated VUS pathogenicity predictions across 72 model configurations and preprocessing settings.
- Currently researching self-supervised learning on graphs for my Master's thesis, adapting JEPA-based methods to biological and molecular graphs for representation learning without labels.

eva — *Milan, Italy*

Co-founder & Software Engineer — *Jan. 2025 - Jan. 2026*

- Co-developed "eva", a web platform helping STEM students organize study plans and prepare for university exams.
- Architected an AI-based system generating tailored tests, quizzes, and questions from user-provided study materials.

AImage Lab, Unimore — *Modena, Italy*

Software Engineer — *Feb. 2024 - Sep. 2024*

- Integrated into the AImageLab research group.
- Contributed to the development of "Missioni", a web application for managing university missions using the Django Framework.

MoRe Racing Combustion — *Modena, Italy*

Software Engineer Intern — *Mar. 2023 - Oct. 2023*

- Software Engineer in Modena More Racing's Electronics & IT team, developing a real-time telemetry system, structured data logging, and multi-level remote access infrastructure.

Publications

2026 M. Minotti*, **R. Masetti***, P. Carrucciu*, L. Ginestretti, M. D. Santambrogio, "eva: Continuous Learning for STEM Students", *IEEE EDUCON 2026*. (*Equal contributions)

2026 S. Tondelli*, **R. Masetti***, L. De Grandis, G. W. Di Donato, M. D. Santambrogio, "A Comparative Analysis of Machine Learning Methods for Genomic Variants Classification", *IEEE EMBC 2026*. (*Equal contributions)
